EXAMINER'S AMENDMENT

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on September 7, 2005 has been entered.

Examiner's Amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

3. Authorization for this examiner's amendment was given in a telephone interview with Wonsuk Choi on May 26, 2005.

Art Unit: 2871

4. The application has been amended as follows:

- In claim 20, line 14, between “formed” and “on the passivation layer”: **insert** –
corresponding to the reflective region,--;
- In claim 20, line 16: **delete** “the second opening” and **replace** with –the
second pixel electrode--.
- In the Title: at the end, insert –with non-oxidizing metal layer in first pixel
electrode--.

Reasons for Allowance

5. The following is an examiner's statement of reasons for allowance: As the claims were read and interpreted in light of the specification, the prior art of record fails to specifically disclose the LCD claimed by Applicant having, in particular, a first pixel electrode formed on the same plane with the gate electrode and a non-oxidizing metal layer that is formed on the transparent conductive layer and has a first opening corresponding to the transmissive region. Although Kubo et al. (US 6,195,140) and Shigeno et al. (US 2002/0033918) disclose many of the elements of the claimed invention, the references nevertheless fail to teach a first pixel electrode formed on the same plane with the gate electrode and having a non-oxidizing metal layer that is formed on the transparent conductive layer and having a first opening corresponding to the transmissive region as recited in independent claim 20. As a result, allowance is proper.

Art Unit: 2871

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
